Hello Members,

My request of you is to please have NPS explain at the 10-26-2010 meeting why TRU 54 (a secondary trail in Turner River Unit) depicted on the 10/13/2010 trail map ends where it ends. I for one recommended this trail but probably 1/2 of it was not included. I have attached a jpeg file showing the adopted segment of this trail in black and the balance of my original recommendation in white.

It does seem to end at a camp but I don't know if that has anything to do with the decision of where to end this trail.

One might ask why this explanation should be provided publicly. There is a good reason. Many of us are working on other TRU plus Corn Dance secondary trail recommendations now. Everyone needs to know everything possible regarding decision making parameters so as not to waste our time or that of NPS's staff.

I appreciate the committee seeing to it that this explanation is provided.
